RESEARCH INTEREST

I'm broadly interested in the intersection of computer science and economics. I aim to tackle mechanism design problems from algorithmic perspectives with applications to (i) classical economy, *e.g.*, auctions, exchange markets, and principal-agent problems, (ii) modern economy, *e.g.*, economic impact of recommender systems for online platforms and (iii) future economy, *e.g.*, the interplay between game theory and generative AI. I also work on theoretical computer science, in particular, online algorithm, online learning, approximation algorithm, and computational complexity.
